

## New adjustable handles with flat lever

**Flat lever and open configuration to avoid any deposit of unhygienic residues.**

The new **MRT** adjustable handle series has been designed for **limited spaces and to avoid any deposit of unhygienic residues or scraps**, especially in case of assembly with the lever in upside-down or side position.

The lever body and the clamping element are made out of glass-fibre reinforced polyamide based technopolymer, which guarantee a resistance to more than 100,000 tightening cycles, under the action of a force of 490 N.

There are four versions available:

- MRT-B: brass boss, threaded blind hole.
- MRT-SST: AISI 303 stainless steel boss, threaded blind hole.
- MRT-p: zinc-plated steel threaded stud.
- MRT-SST-p: AISI 303 stainless steel threaded stud.

The push button with ergonomic cavity for a comfortable positioning of the operator's thumb is available in two standard colours: black and orange.

Three are the lever dimensions: 42, 65 and 80.

The technical data sheet of the product, with drawings and table with codes and dimensions, is available on our website [www.elesa-ganter.com](http://www.elesa-ganter.com)
